# FL-10000 Respiratory Humidifier

Flexicare's Respiratory Humidifiers provide warmed and humidified inspired gases to patients requiring ventilation or respiratory support.

- + Accurate
- + Adaptable
- + Intuitive
- + Range of modes

## Intuitive Set-up

FL-10000 intuitively guides you through the simple set-up process step-by-step, each option clearly displayed with large visual cues.

## Select therapy and circuit type

Select the desired therapy mode and circuit type to meet your patient's respiratory requirements:

- Invasive/Non-Invasive modes
- Dual/Single Limb Circuits
- Heated/Non-Heated Circuits

## Customised Care

Advanced features give complete control over temperature and humidity settings. Use the default temperature settings or access the password-protected advanced settings to adjust temperatures within the recommended range to suit your patient's needs.<sup>1</sup>

## Touch screen humidification

The FL-10000 Respiratory Humidifier has an ergonomic touch screen user interface, is easy to operate and provides the information you need at a glance through a large LCD display.

Packed with advanced features. Simple to operate.

### 5.2" Touch Screen Interface

Easy to read high-contrast display even in direct sunlight.

### Advanced Settings Mode

Allows you to easily set the required temperature outside the normal parameters for a continuous level of humidity to your patients.

### Passcode Protection

Protect your custom settings with a 4-digit passcode to prevent unauthorised changes.

### Intuitive Alarm Messages

FL-10000 displays clear on-screen fault diagnoses and alerts you with audible alarms.

### Language Selection

FL-10000 can be setup to display 6 different languages. Available include English, Italian, French, Spanish, German and Dutch.

### Warning Logs

Records a full list of warnings, alarms and errors for traceability.

# FL-9000 Respiratory Humidifier

Simple to operate with intuitive controls and easy to select functions.

## Misconnection Prevention

Easy-connect heated wire and temperature probe sockets of different design ensure correct connection.

## Multi-Function Display

Clear easy-to-read LED Display with the option to check Airway, Chamber or Heater Plate Temperature, or hold on a custom setting.

## Alarm Indications

Clear, colour coded visual and audible alarms notify the user of set-up errors, accidental disconnection during use or delivered temperatures outside the set parameters.

## Variety of Circuit Options

Suitable for Invasive or Non-Invasive Ventilation, and Heated or Non-Heated Wire Breathing Systems.

## Positive Connection

Heater Plate with spring loaded locking mechanism for secure placement of humidification chamber.

## Watch Online

Our YouTube channel has a suite of helpful videos to demonstrate setup, cleaning and use of the FL-9000.

# Humidification Chambers

Part of a complete system to actively warm and humidify inspired respiratory gases delivered to ventilated patients and those receiving respiratory support.

- + Clear construction
- + 22mm connectors
- + Red fill indicator
- + Removable safety cover

## Optimal Humidity

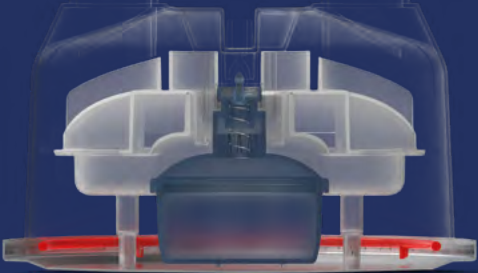

Low water volume reduces initial warm up time and temperature fluctuations during use, providing consistent humidity levels.

## Gas Flow Diverters

Diverters maximise gas flow through the chamber optimising humidity levels.

## Heat Transfer

Flat base for complete contact with the heater plate for efficient, rapid and responsive water heating.

### Overfill Protection

Primary and a secondary floats to regulate the flow of water and provide protection against overfilling.

### Auto-Fill Humidifier Chamber

### Double Valve Auto-Fill Humidifier Chamber

### Manual Fill Humidifier Chamber

# VentiMyst® Heated Wire Breathing Systems

VentiMyst Advanced Active Humidification delivers absolute humidity and manages excess rain-out<sup>1</sup>.

Excessive condensation within a breathing system can cause accidental drainage of rainout into patient's airway, resulting in Ventilator Acquired Pneumonia (VAP).

VentiMyst is the ultimate solution for moisture management, actively transferring moisture before it can become hazardous to patients, clinicians and equipment.

**Standard Corrugated Heated Wire Limb**  
With rain-out pooling.

**VentiMyst® Heated Wire Limb**  
Reduced build-up of rain-out.

<sup>1</sup> AARC Evidence-based clinical practice guidelines: care of the ventilator circuit and its relation to ventilator-associated pneumonia. Respiratory Care 2003;48(9):869-879.

# VentiMyst®

Flexicare's Dual Heated Wire Breathing Systems with VentiMyst technology deliver absolute humidity and manages excess rain-out.

VENTIMYST

## Embedded Dual Heated Wire with VentiMyst

Heated wires are embedded in a reinforced spiral construction throughout the length of the smoothbore inspiratory limb, providing improved heat distribution in the wall of the circuit.

### Reduced Risk of Contamination

Closed system and reduction in circuit breaks lowers the risk of contamination reaching the patient, clinician or ventilator.

### Reduced Patient Risk

Minimises need to open or break the circuit to remove excess rain-out, therefore decreasing the risk of Ventilator Acquired Pneumonia.<sup>1</sup>

### Reduced Risk of Resistance

Less risk of increased resistance to gas flow from fluid build-up in the expiratory limb or filter.<sup>2</sup>

# Heated Wire Breathing Systems

Low compliance Single and Dual heated breathing systems for Invasive and Non-Invasive therapies, delivering gas at optimal humidity and temperature to patients requiring respiratory support.

## Double Coiled Heated Wires

All heated limbs feature a double coiled heated wire configuration to provide consistent warming of gas flow and limb wall to minimise possible rain-out.

## Sterile Packed

All Heated Wire Breathing Systems are supplied sterile for superior patient safety.

# Clic™ Closed Suction Catheters

Effectively clears patient airways of accumulated secretions improving respiratory function.

SCAN HERE

3D VIEW

## Truly Closed System

Air in the sleeve of a traditional Closed Suction Catheter leaks during the insertion of the catheter, allowing viruses and bacteria to escape into the clinical environment.

## Thumb Valve with Bacterial/Viral Filters

Clic features an easy to use thumb valve with built-in Bacterial/Viral Filters creating a secure barrier that filters the escaping air, protecting clinicians and patients against viruses and bacteria.

During insertion, air passing through the sleeve is vented through the filter adding another layer of protection for clinicians, the patient, caregivers, and the hospital environment.

### 99.9% Bacterial/Viral efficiency

2x filters add an additional layer of protection for caregivers and clinicians.

### Reduced exposure of airborne contaminants

Reduced exposure of airborne contaminants to the caregiver during catheter insertion.

### Enhanced cleanliness

Enhanced cleanliness supporting the overall extended use of the catheter system.

Clic Closed Suction Catheter maintains a continuous closed ventilation system, protects ventilation and pressure levels, and reduces risk of cross-contamination and Ventilator Associated Pneumonia (VAP).

# OmniOx HFT700

The OmniOx HFT700 combines the ability to deliver High Flow Nasal Oxygen Therapy, CPAP and Bi-Level ventilation with humidification and an Oxygen blender integrated within a single device.

The OmniOx provides the combined solution to deliver simple, effective integrated non-invasive respiratory support. High Flow Nasal Oxygen Therapy presents many advantages and is the first line treatment for many patients with Acute Respiratory Failure<sup>1</sup>.

Patient compliance to maintain consistent therapy and pressures remains a challenge, but the capability of switching from HFOT, CPAP and Bi-level pressure support for patients struggling with PAP adherence<sup>2</sup> can improve patient comfort and therapy compliance.<sup>3</sup>

### Intuitive control

5" colour TFT LCD touch screen ensures easy to use, intuitive control with two-touch access to change therapy, input unique patient settings, set alarms and review controls.

### Adaptable

Compact, versatile, single unit device for use in acute wards, critical care, emergency departments and recovery rooms. Integrated gas flow generator enables stand alone cylinder attachment when piped oxygen is unavailable.

### Critical

Essential real-time monitoring enables delivery of FiO<sub>2</sub> Controlled Target SpO<sub>2</sub> Feedback. Monitoring functions include: FiO<sub>2</sub>, SpO<sub>2</sub>, Respiratory Rate, Heart Rate, Airway Temperature & Oxygen Flow Rate.

### Simple

Controlled by a simple touch screen, switching from one mode to another with two on-screen commands.

# High Flow Oxygen Therapy Breathing Systems

Smoothbore inspiratory limbs with embedded heated wires in a reinforced spiral construction. Delivers optimal humidity and manages excess rain-out.<sup>1</sup>

## EMBEDDED SINGLE LIMB CIRCUITS

### Take back control of humidity

The embedded heated wire throughout the length of the inspiratory tube reduces build-up of rain-out in the circuit compared to conventional heated wire circuits.

This provides improved heat distribution in the wall of the breathing circuit, minimises cold spots, maintains gas temperature and humidity levels.

To deliver respiratory gases at optimal temperature and humidity to the patient during High Flow Oxygen Therapy, Flexicare offers our single limb heated wire breathing system in Neonatal, Paediatric and Adult configurations to address the needs of each individual patient, enhancing patient care and improving clinical outcomes.

### Reduced Patient Risk

Reduced risk of accidental drainage of rain-out into the patient's airway.<sup>2</sup>

### Low Compliance Tubing

Accurate delivery of gas volumes and ventilation pressures to the patient.

### Temperature Transfer Efficiency

Helps prevent gas temperature loss and surface cold spots, minimising rain-out.

# Veoflo® High Flow Nasal Cannula

For patients with mild to moderate respiratory distress syndrome, Veoflo High Flow Nasal Cannula is the comfortable choice for effective delivery of High Flow Oxygen Therapy (HFOT)

## Soft Contoured Nasal Prongs

Comfortable and well tolerated silicone prongs aid patient compliance.

## Adjustable Tube Placement

Detachable smoothbore tube and plug so the tube can be comfortably placed on either side.

## Wide Bore Nasal Prongs

Allows delivery of flow rates up to 60 l/min without increasing resistance.

## MRI Safe

Fully metal-free making Veoflo safe to use in the MRI suite.

## Quick and Secure Setup

Wings on the swivel connector for easy connection and disconnection.

## Wide Elastic Split Head Strap

Easy to adjust, provides a secure fit and increased patient comfort.

## Veoflo Tracheostomy

Tracheostomy Interface facilitates the delivery of humidified respiratory gases to spontaneously breathing patients with bypassed upper airways.

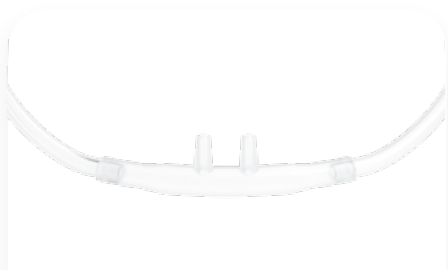

## Veoflo Adaptor

Available as an individual item or as part of a Veoflo kit.

# High Flow Nasal Cannula

Lightweight, flexible tubing combined with soft contoured nasal prongs ensures a comfortable fit enhancing therapy compliance.

**Soft Touch Tubing**

Gentle on the ears and face, minimising friction and pressure on delicate tissues.

**Adjustable Slider**

Secure and comfortable fitting without the need for a head or neck strap.

**Secured Oxygen Delivery**

Star lumen tubing ensures the flow of oxygen is maintained even if the tube becomes kinked.

High Flow Nasal Cannulas offer many advantages when used in conjunction with humidification, including accurate delivery of high FiO<sub>2</sub> and optimised mucociliary clearance, while increasing alveoli recruitment in a technique that offers improved patient comfort and compliance.

# Nioflo™ Nasal Cannula

A premium cannula for the accurate delivery of high and low flow humidified gases, optimising mucociliary clearance, increasing alveoli recruitment and improving patient comfort and compliance.

## NIOFLO NASAL CANNULAS

### Protecting our most vulnerable patients

NioFlo's flexible design allows the care provider to avoid the over the ear style of cannulas that lead to tissue breakdown.

Ears are the most common site for Medical Device Related Hospital Acquired Pressure Ulcers (MDR HAPU), with 35% of affected patients suffering tissue breakdown in this sensitive area.<sup>1</sup>

### Unique Swivel Design

Additional flexibility with swivel design connector to reduce torque on cannula.

### Adjustable Slider

Secure and comfortable fitting without the need for a head or neck strap.

### Maximum Compatibility

Included adapter provides a secure connection to both 15mm and standard O<sub>2</sub> tubing.

## VentiMask®

Ventimask delivers High Flow Oxygen Therapy to patients who are unsuitable for a High Flow Nasal Cannula (HFNC), such as those with blocked nasal passages or following trauma/surgery to the nasopharynx.

Large capacity mask with exhalation vents reduces air dilution, improves CO<sub>2</sub> washout and prevents pressure build-up.

## Humidity Adaptor

The humidity adaptor is an accurate method of delivering fixed concentration, humidified High Flow Oxygen Therapy to a patient when used with Ventimask, Venturi barrel and Single Limb Heated Wire Breathing System.

# Bubble CPAP System

Provides consistent and accurate delivery of Continuous Positive Airway Pressure and warmed, humidified inspiratory gases to spontaneously breathing neonates and infants requiring respiratory support.

- + Pressure relief valve promotes patient safety
- + Expiratory limb swivel connector prevents pressure loss or accidental disconnection
- + Positive connection and setting lock prevents changes of PEEP level.
- + Funnel design to reduce the risk of spillages

The design of the Flexicare Bubble CPAP simplifies the process of CPAP setup with numerous safety features, allowing the clinician to focus on their patient's needs.

## Secure CPAP Pressure Range

The CPAP probe is locked when a pressure is set; reduces risk of inadvertent pressure setting change.

## Detachable Overflow Chamber

Easily emptied without interruption of CPAP.

## Secure Seal

A primary seal regulates the flow of water into the chamber and provide assured protection against overfilling.

# Infant Nasal CPAP

Soft, anatomically curved nasal prongs and a knitted cap with adjustable fastenings, providing an optimal fit and effective seal for infants receiving CPAP therapy.

## Atraumatic

Anatomically curved soft silicone cannula with depth markings in a range of 7 sizes for a secure and leak-free fit to maintain CPAP and minimise the risk of tissue damage.

## Secure Positioning

Securing straps on the soft knitted cap help position the circuit tubing, reducing the risk of cannula movement.
